

## Anritsu MG645B

**Description:** The Anritsu MG645B is a refurbished Standard Signal Generator that covers the super-wide band from 50kHz to 1040MHz.

### **Other Info:**

The Anritsu MG645B's carrier frequency has excellent accuracy and stability thanks to use of a high-performance counter and a phase lock loop (PLL) which can lock on the frequency corresponding to the frequency channel. The output level can be varied by a step dial and a Vernier dial from 130dB $\mu$  (+17 dBm) to -30 dB $\mu$  (-143 dBm). AM can be modulated up to 100% and FM up to 200kHz in deviation.

The Anritsu **MG645B** carrier frequency has excellent accuracy and stability thanks to use of a high-performance counter and a phase lock loop (PLL) which can lock on the frequency corresponding to the frequency channel.

- 50 kHz to 1040 MHz bandwidth
- The output level can be varied by a step dial and a vernier dial from 130dB $\mu$  (+17 dBm) to -30 dB $\mu$  (-143 dBm).
- AM can be modulated up to 100% and FM up to 200kHz in deviation.

### **Specifications**

Frequency Range Max.  
1.04GHz

### **Freq. Resolution**

10.0Hz

### **Output Power**

+17 dBm to -143 dBm

### **Modulation**

AM, FM

### **More Details**

Signal Generator
